

pain between the present study and to Walsh⁽¹²⁾ and Braus⁽¹³⁾ studies.

Conclusion

- 1) The shoulder pain is very common problem in stroke.
- 2) The shoulder pain development is more common in older age group.
- 3) Patients with cortical involvement are at high risk to develop shoulder pain
- 4) The shoulder pain development is not related to the side of hemiplegia, sex and grading of muscle weakness.
- 5) Rheumatologist should examine every patient and plan for early exercise should be encouraged.
